

J187 Introduction to Multimedia

Class 3 Exercise: Building XHTML Pages

In this exercise you will create an index page for a story on romantic cooking. In addition, you will create three recipe pages and an external link. You will be working in the folder titled exercise 2.

Creating the index page

1. Open the page index.html
2. Copy the text from the file romantic.doc and paste it into your page.
3. Place the photo romantic.jpg from the images folder. w:330 h:397
4. Hyper link the text for each recipe to the matching page (also in the folder)
5. Hyper link the text for the romance site to <http://www.theromantic.com>
5. Apply the following formatting to the content:

- Head: Apply h1 tag and make it Arial, Helvetica, sans-serif
- Byline: make it Arial, Helvetica, sans-serif with a size of 4
- Photo: Right Justify with a horizontal spacing of 10 pixels

Creating the recipe pages

1. Copy and paste the text from the file recipes.doc into the corresponding html pages. One recipe per page.
2. Add the photo for each page and set it to be align right with 10 pixels of horizontal space
 - cozy.html: food_cozy.jpg (w:382 h:194)
 - creamy.html: food_creamy.jpg (w: 340 h: 199)
 - rich.html: food_rich.jpg (w: 358 h: 186)
3. Format the headlines with the same settings you used for the index page
4. At the bottom of each recipe, add the text BACK and create a hyper link to index.html

Done? **Test your pages in a web browser and call me over!**
